Deliberation Transcripts: Transboundary Haze Enforcement and Corporate Accountability

Item ID: ITEM_03 | **Sessions:** 24 Trials (4 Dyads × 5 Trials) | **Total Dialogue Turns:** 96 turns | **Source:** item03_transboundary_haze_transcript.json

Trial 1 of 6 | Dyad D1: Technocrat vs Ideologue

Dynamic: Ideological Friction | **Turns:** 4

Turn 1 of 4 • Technocratic Pragmatist (P1)

I think we both want the same outcome - clean air and real accountability - but we have to be honest about the tools that actually work. Unilateral prosecution under the THPA is important as a legal signal, but without transparent concession maps and mutual legal assistance from Indonesia, convictions are operationally very difficult to secure and enforce. At the same time, purely diplomatic assistance without liability pressure hasn't deterred repeat burning. Perhaps we can find common ground in a dual-track approach: strengthening the evidentiary and enforcement mechanism while tying cooperative assistance to verifiable compliance.

Turn 2 of 4 • Ideological Advocate (P2)

I appreciate your pragmatism, but we cannot allow bureaucratic hurdles like concession map secrecy to become an excuse for impunity while our children, elderly, and outdoor workers choke on PSI over 200. Accountability is not just a legal signal — it is a moral obligation to protect public health and our shared environment from corporate greed. I can support your dual-track idea, but only if we make it principled: tie any cooperative assistance and market access directly to verifiable transparency, independent satellite monitoring, and enforceable liability for parent companies here in Singapore.

Turn 3 of 4 • Technocratic Pragmatist (P1)

That is a fair and important correction — public health impacts at PSI over 200 are not abstract, and any framework we propose must have real deterrent effect, not just process. I can support conditioning market access and assistance on transparency, provided we design it to be legally durable and operationally verifiable: for example, requiring Singapore-registered parent companies to disclose concessions and submit to independent satellite verification as a condition for financing and agri-commodity trading privileges. In return, we could formalize that compliance unlocks enhanced cooperative support — like peatland restoration funding and firefighting resources — through bilateral and ASEAN channels, which improves enforceability. Would you be open to prioritizing extraterritorial liability on parent entities here, where we have jurisdiction, rather than pursuing uncollectable foreign fines that risk diplomatic deadlock?

Turn 4 of 4 • Ideological Advocate (P2)

Yes, I can meet you there — if we are clear that targeting Singapore-registered parent companies is not a retreat, but the most principled and powerful lever we have. Where we have jurisdiction, we must have courage: mandatory concession disclosure, independent satellite verification, and enforceable liability cannot be voluntary CSR, they must be the price of access to our financial and trading hub. In exchange, I will support your cooperative track — peatland restoration and firefighting assistance — but only when it rewards verified compliance, not when it subsidizes the same conglomerates that profit from burning while our people suffer.

Trial 1 of 6 | Dyad D2: Technocrat vs Populist

Dynamic: Asymmetric Vulnerability | **Turns:** 4

Turn 1 of 4 • Technocratic Pragmatist (P1)

As a fellow citizen who lived through the PSI over 200 this past year, I understand the frustration driving calls for aggressive prosecution, but we also have to be realistic about the operational limits we face with sealed concession maps and jurisdictional barriers that have stalled THPA cases since 2014. Unilateral legal action without evidence access is fiscally costly and unlikely to yield enforceable judgments, while purely diplomatic assistance alone does not create sufficient deterrence for repeat corporate offenders. I believe our common ground lies in pursuing a dual-track approach that is both credible and workable. I would propose we focus on strengthening our extraterritorial evidence toolkit through satellite verification and disclosure requirements, paired with conditional cooperation, as a starting point for our discussion.

Turn 2 of 4 • Disaffected Populist (P3)

Look, with all due respect, your "satellite toolkit" and "conditional cooperation" talk sounds like more wayang to let these big companies off the hook while we ordinary people suffer. My kids were stuck indoors for weeks, my elderly mother was coughing non-stop, and hawkers and delivery riders lost income - where is the fairness in that? I'm sick of us being told to be patient and diplomatic while they profit and we pay with our health and medical bills. If you want me to consider your middle path, then it must come with real teeth - make those companies pay into a fund for our healthcare and lost wages, and ban their products here if they don't cooperate, no more excuses.

Turn 3 of 4 • Technocratic Pragmatist (P1)

I hear you clearly on fairness — the health costs and income losses borne by families, hawkers and delivery riders during PSI >200 weeks are real, and any credible policy must ensure those affected see tangible restitution, not just diplomatic statements. Where I would add a pragmatic safeguard is on enforceability: an outright product ban without a transparent evidence standard risks WTO challenges and retaliation that hurts our own consumers, while an unfunded prosecution drive drains public resources with little recovery. As a workable compromise with teeth, I can support a polluter-pays model — a conditional levy or escrow contribution tied to THPA Section 10 notices for non-cooperative entities identified via satellite and wind-trajectory data, with proceeds earmarked for a Haze Relief Fund for healthcare subsidies and income support. In parallel, we link market access to disclosure: entities that refuse to provide concession maps or submit to independent audit face targeted procurement and retail disclosure restrictions until they comply.

Turn 4 of 4 • Disaffected Populist (P3)

Okay, that Haze Relief Fund idea is at least something real — if you can guarantee the money actually goes to our clinics, our parents' medical bills, and hawkers and riders who lost income, not disappear into some big government pot, then I'm willing to listen. But I'm still not trusting these companies to just volunteer their maps, so if they get a Section 10 notice and still refuse to open up and pay into that escrow, then we must really block them from selling here — no more soft warnings. You give me that automatic penalty with no loopholes, and I'll support your satellite evidence approach instead of just demanding we sue everyone straight away.

Trial 1 of 6 | Dyad D3: Ideologue vs Populist

Dynamic: Polarized Stalemate | **Turns:** 4

Turn 1 of 4 • Ideological Advocate (P2)

My fellow Singaporeans should not have to gasp through PSI 200+ air while billion-dollar plantation conglomerates hide behind secret concession maps and claims of sovereignty. The Transboundary Haze Pollution Act was passed for exactly this moment — to declare that our right to breathe clean air is non-negotiable, and that profit extracted by burning our lungs must carry legal consequences. I understand my fellow citizen's concern for diplomatic ties, but diplomacy without accountability is just permission to pollute again next dry season. My proposal for common ground is this: let us unite on a dual-track of principled pressure — pursuing every available legal lever under the THPA while offering cooperation only on the condition of transparency and corporate liability.

Turn 2 of 4 • Disaffected Populist (P3)

Look, when PSI hit over 200 my whole family was stuck indoors with windows taped and my kid's asthma inhaler running out, so don't tell me about 'principled pressure' — that means nothing if these big plantation bosses can just hide their maps and laugh at us. I agree they should pay, but I don't trust this THPA court wayang overseas to do anything for us on the ground while elites in air-con offices talk about diplomacy. If you want me to support going after these companies, then the money better come back here — free N95s, subsidised air purifiers, cover our clinic bills — not just fines that disappear into government coffers.

Turn 3 of 4 • Ideological Advocate (P2)

You are absolutely right to demand that justice be felt in our homes and clinics, not just in court filings — your child's health is exactly why this fight matters, and any fine collected must not vanish into abstract coffers. I hear your distrust of empty legal wayang, which is why I propose we strengthen the THPA track by legally earmarking all penalties into a dedicated Transboundary Haze Community Health Fund for N95s, purifiers, and medical subsidies for vulnerable families. In return, we can together insist that this people-centred restitution becomes our non-negotiable condition for any diplomatic cooperation or firefighting aid. That way we marry accountability abroad with tangible protection here, so neither sovereignty nor corporate secrecy is allowed to make our children pay the price.

Turn 4 of 4 • Disaffected Populist (P3)

Okay, now you're talking sense — if every dollar from those fines is locked for our N95s, purifiers and clinic bills then at least it's real help, not just government wayang. But I'm not stupid, I know those companies will hide their maps for years so we cannot wait for court money to breathe — government must pay for protections NOW upfront. If you agree to that, I can support chasing them hard, but no more free firefighting help until they show us the maps and accept liability.

Trial 1 of 6 | Dyad D4: Ideologue vs Everyman

Dynamic: Rhetorical Dominance | **Turns:** 4

Turn 1 of 4 • Ideological Advocate (P2)

When our children were forced to wear N95s indoors and our elderly gasped for air at PSI over 200, that was not a diplomatic inconvenience — it was a profound injustice inflicted by corporate greed hiding behind sovereign secrecy. I cannot accept that foreign concession map secrecy and jurisdictional excuses should grant plantation conglomerates impunity while Singaporeans bear the health and environmental cost. My conviction is that we must pursue aggressive extraterritorial accountability under the THPA, because without justice there is no deterrence. Yet I want to find common ground with you by exploring how we can pair that principled legal pressure with smart, cooperative tools that actually get fires extinguished and our rights protected.

Turn 2 of 4 • Open-Minded Everyman (P4)

I hear you, and I felt that fear too when my family had to keep windows closed for weeks and check the PSI every morning — it's hard not to feel angry when our health is affected like that. At the same time, I'm worried that if we push too hard on our own with prosecutions that get stuck because we can't even get the maps or get them to court, we might end up with tough talk but no cleaner air. Maybe we can agree to keep the THPA notices as firm pressure, but pair it with practical cooperation like joint firefighting help and pushing for open concession maps? That way we show we are serious about accountability, but also do what actually helps our neighbours stop the fires and keeps our community healthy.

Turn 3 of 4 • Ideological Advocate (P2)

I appreciate you naming that shared fear — none of us should have to decide between our family's health and opening a window in our own home, and that is precisely why anger must become accountability. I can meet you where you are: I will support pairing cooperative firefighting assistance and diplomatic engagement, but only if we refuse to treat the THPA Section 10 notices as symbolic tough talk and instead use them as binding leverage to demand transparent, publicly verifiable concession maps. Real cooperation cannot mean Singapore quietly absorbs the cost while conglomerates hide behind sovereign secrecy; it must mean conditional assistance tied to independent monitoring and liability. If we anchor partnership in that principle — no impunity, no secret maps — then we can both extinguish fires today and deter the injustice from returning next haze season.

Turn 4 of 4 • Open-Minded Everyman (P4)

I think that's a fair and sensible middle ground you are offering — keeping the Section 10 notices as real leverage for transparent maps and accountability, not just words on paper. I can support that, as long as we also don't withhold the practical help that puts out fires now, because our families need clean air today as much as justice for tomorrow. So maybe we agree: assistance and cooperation, but it has to be conditional on verifiable maps and independent monitoring, and the THPA stays firmly in place until they deliver.

Trial 1 of 6 | Dyad D5: Populist vs Everyman

Dynamic: Grassroots Realignment | **Turns:** 4

Turn 1 of 4 • Disaffected Populist (P3)

Look, I don't care about all this diplomatic talk and sovereign whatever — my kids couldn't even go to school last year because the air was poison, and we had to spend money on purifiers and masks while those big companies get away with it. If the government can send us Section 10 notices and fines so fast, why they so scared to actually punish these plantation bosses who are burning? I'm willing to listen to the other side about not starting a fight with neighbours, but only if we can agree first that Singaporeans' health must come before keeping things nice-nice with corporations.

Turn 2 of 4 • Open-Minded Everyman (P4)

I hear you, and I really feel the same — last year my family also stayed indoors for days and I worried about my elderly parents breathing that air, so I understand why you feel health must come first. I agree with you that Singaporeans' health can't be second to keeping corporations happy, that has to be our common ground. At the same time, I'm thinking if we try to punish alone without the concession maps or help from next door, we might get stuck and the haze just comes back again next year. Maybe we can push for both — keep using the THPA to hold companies accountable where we have clear proof, and also push for stronger teamwork with our neighbours on firefighting and sharing information, so we actually get cleaner air in a practical way?

Turn 3 of 4 • Disaffected Populist (P3)

Okay, I appreciate you saying that — health first, not corporations, that's the baseline I can agree on. But listen, this "teamwork" thing cannot just be we send money and help fight fires while they keep hiding the maps and the bosses hide behind borders — then we suffer again next year. If we want compromise, I can accept doing both, but only if the government really uses THPA to name, shame and fine them where got proof, and that money must go back to us — clinics, masks, purifiers for heartland families, not just wayang.

Turn 4 of 4 • Open-Minded Everyman (P4)

That sounds very fair to me — thank you for meeting in the middle. I agree, teamwork cannot be one-way where we just help and get haze again; it has to be two-way with real sharing of concession maps and enforcement on their side too. And I support your idea fully — when NEA does have clear proof under THPA, we should name and fine those companies, and that money should go directly back to help heartland families with clinics and masks. That way we are both firm on accountability and also practical about working together so we actually get cleaner air for everyone.

Trial 1 of 6 | Dyad D6: Populist vs Technocrat

Dynamic: Anti-Elitist Pushback | **Turns:** 4

Turn 1 of 4 • Disaffected Populist (P3)

I tell you honestly, my family was stuck indoors for weeks with the PSI over 200, eyes stinging, clinic bills piling up, while those big plantation bosses overseas act like nothing happened. I don't buy this diplomatic wayang and sovereign excuse - if they pollute our air, they should pay, simple as that. But I also know we cannot prosecute ghosts if we don't even have the maps to prove which company burnt what. So let's find common ground - can we agree to freeze and punish the money and assets they have here in Singapore first, and make that our starting point?

Turn 2 of 4 • Technocratic Pragmatist (P1)

I understand the frustration — PSI above 200 imposes real public health costs and economic disruption, so the expectation of accountability is legitimate. From an operational standpoint, freezing assets linked to Singapore without first establishing a clear evidentiary chain and due process under the THPA risks legal reversal and reputational costs to our financial hub. However, your point about leveraging financial presence here is pragmatic — we already require listed entities to disclose concession exposure, and we can tighten that. A viable compromise could be to pursue conditional financial accountability — such as enhanced disclosure, escrow or surety requirements for firms with opaque concessions — while we simultaneously close the evidence gap with independent satellite verification and mutual legal assistance, rather than relying solely on either unilateral prosecution or open-ended diplomatic assistance.

Turn 3 of 4 • Disaffected Populist (P3)

Look, I appreciate you actually listening and not just throwing jargon at me — that due process point makes sense, I also don't want the case to collapse and they laugh at us. But for ordinary families like mine, promises about satellite verification mean nothing if there's no pain for them now, so I can live with your escrow and disclosure idea ONLY if it's got teeth — if you hide your maps, you put money in escrow here or you cannot do business here. That way we get real protection here at home, and you still get your proper evidence chain for the prosecution later, fair or not?

Turn 4 of 4 • Technocratic Pragmatist (P1)

That is a fair and workable formulation — accountability with due process, but with immediate financial consequence for opacity. We can structure it as: continued market access and financing in Singapore conditional on timely concession disclosure, with non-compliant firms required to post an escrow or increase surety that is forfeitable upon a THPA finding, all grounded in the existing Section 10 notice framework. This preserves legal defensibility while creating the "teeth" you rightly demand, and it gives us leverage to compel map disclosure rather than waiting for it. If we pair that with pooled satellite verification and formal MLA requests to close the prosecution evidence gap, we get both short-term protection and long-term enforcement credibility.

Trial 1 of 6 | Dyad D7: Everyman vs Technocrat

Dynamic: Pragmatic Grounding | **Turns:** 4

Turn 1 of 4 • Open-Minded Everyman (P4)

I think we all felt how bad the haze was last year when PSI went over 200, and it's understandable to want to punish those responsible, but I also worry about pushing too hard and damaging relationships with our neighbours. I don't know all the legal details about the THPA and overseas prosecution, but from a practical view we need both accountability and cooperation to actually stop the fires. Maybe we can find a middle path where we keep firm pressure on companies while also working together on prevention?

Turn 2 of 4 • Technocratic Pragmatist (P1)

I agree the frustration when PSI exceeded 200 is legitimate, but we have to be realistic about enforcement constraints under the THPA — without access to foreign concession maps and mutual legal assistance, unilateral prosecution is unlikely to secure convictions and risks diplomatic deadlock. At the same time, cooperation alone without accountability creates moral hazard for plantation conglomerates. A viable compromise is to maintain Section 10 notices as leverage while pivoting to enforceable, systems-level tools: mandatory supply-chain disclosure for palm oil importers, linking firefighting assistance to transparency on concession boundaries, and strengthening NEA-NEA satellite verification for targeted civil liability.

Turn 3 of 4 • Open-Minded Everyman (P4)

That makes sense to me — I appreciate you explaining why just prosecuting under the THPA alone is so hard without the maps and cooperation from next door. I like your idea of using the Section 10 notices as pressure but also linking our help with firefighting to more openness, that feels fair to both sides. And making companies that import palm oil here show where it comes from seems like a practical way to hold them accountable without starting a big fight. Hopefully that way we can keep good neighbour relations while still protecting our air and health together.

Turn 4 of 4 • Technocratic Pragmatist (P1)

I appreciate your pragmatic openness to that middle path — it reflects the reality that we need both leverage and cooperation to achieve results. Building on that, we can operationalize this compromise by formalizing conditional assistance: our firefighting and technical support continues, but is tied to reciprocal data-sharing on concession maps and hotspot verification. Domestically, we strengthen accountability not through symbolic prosecutions unlikely to succeed, but through targeted economic instruments like mandatory traceability and procurement standards for palm oil-linked firms. This protects our air quality and fiscal resources while preserving the diplomatic channels essential for long-term prevention.

Trial 1 of 6 | Dyad D8: Everyman vs Ideologue

Dynamic: Moral Grounding | **Turns:** 4

Turn 1 of 4 • Open-Minded Everyman (P4)

Hello, I'm not an expert on the law, but like many of you I really felt the haze last year — my kids couldn't play outside and we were all worried about the air. I can understand why some want to punish the companies strongly, but I also see why we need to keep good relations with our neighbours to solve this together. Maybe we can find a middle path where we stay firm on accountability using the tools we have here, while also pushing for more cooperation like sharing maps and helping with fire prevention. I'm here to listen and work out a fair, practical way forward with all of you.

Turn 2 of 4 • Ideological Advocate (P2)

I appreciate your desire for a middle path, and I share your concern for our children breathing hazardous air — but we cannot let "good relations" become an excuse for impunity. When PSI exceeds 200 and our vulnerable elderly and outdoor workers suffer, while conglomerates hide behind secret concession maps, cooperation without accountability is just complicity. The THPA was created precisely for this extraterritorial injustice, and we must fully enforce Section 10 notices, pursue civil liability, and impose procurement bans on linked entities here in Singapore. True regional solidarity doesn't mean non-interference at the expense of our people's health; it means standing firm on environmental justice while offering firefighting help only in lockstep with transparency and corporate liability.

Turn 3 of 4 • Open-Minded Everyman (P4)

I hear you, and I agree it's not fair for our elderly and kids to suffer while companies can hide behind secret maps — health has to come first. At the same time, I'm worried that if we only push punishment without cooperation, we might get stuck with no maps and no enforcement at all because of the jurisdictional limits. Could we agree to fully use the tools we do have here, like enforcing the Section 10 notices and procurement bans, but link our firefighting help and business cooperation to more transparency on concession maps? That way we stay firm on accountability but also give our neighbours a practical reason to work with us for the long term.

Turn 4 of 4 • Ideological Advocate (P2)

I can meet you on that linkage, but it must have teeth — our firefighting assistance and business cooperation cannot be unconditional goodwill while our people choke. I will support coupling enforcement of Section 10 notices and procurement bans here at home with a clear offer: transparency on concession maps unlocks deeper joint prevention, but secrecy triggers escalated civil liability and market exclusion in Singapore. That balances firm accountability with genuine partnership, and it refuses to sacrifice the health of our elderly, children, and outdoor workers for diplomatic comfort. If we codify that conditionality together, we turn your middle path into real leverage for justice.

Trial 2 of 6 | Dyad D1: Technocrat vs Ideologue

Dynamic: Ideological Friction | **Turns:** 4

Turn 1 of 4 • Technocratic Pragmatist (P1)

As fellow citizens affected by the PSI exceeding 200, we all want accountability, but we need to be realistic about the operational limits of the THPA. Extraterritorial prosecution without access to foreign concession maps and mutual legal assistance is unlikely to result in successful convictions, and aggressive unilateral action risks undermining ASEAN cooperation we need for satellite data and firefighting access. I propose we focus our common ground on strengthening enforcement leverage that actually works — such as tightening evidentiary presumptions under the THPA and linking market access to verifiable sustainability compliance — rather than pursuing purely punitive measures that are fiscally and diplomatically unsustainable.

Turn 2 of 4 • Ideological Advocate (P2)

I understand your pragmatism, but when PSI soared past 200 and our most vulnerable — elderly, outdoor workers, children with asthma — were left gasping behind closed windows, to call justice "diplomatically unsustainable" is to sacrifice human dignity for administrative convenience. Sovereignty cannot be a shield for conglomerates that profit from burning our shared air, and the THPA was enacted precisely to pierce that excuse. I can meet you on strengthening rebuttable evidentiary presumptions and tying Singapore market access and financing to verifiable no-burn compliance, but only if that leverage is explicitly coupled with unrelenting prosecution, public disclosure of linked entities, and a polluter-funded health and community resilience fund — not as an alternative to accountability.

Turn 3 of 4 • Technocratic Pragmatist (P1)

I appreciate your focus on the health impact for our vulnerable groups, and I agree that sovereignty should not become blanket immunity for commercial burning — that is exactly why the THPA's extraterritorial design matters. I can support coupling strengthened rebuttable presumptions and market-access conditionality with persistent prosecution efforts and transparent public disclosure of linked entities, provided we anchor this in due process and verifiable supply-chain evidence to ensure convictions hold. On the polluter-funded resilience fund, I would support it if financed through earmarked THPA penalties, sustainability-linked compliance bonds, and regional insurance mechanisms rather than general taxation, which keeps it fiscally sustainable and directly ties cost to risk.

Turn 4 of 4 • Ideological Advocate (P2)

I welcome your move toward genuine accountability — anchoring prosecution in verifiable supply-chain evidence and due process strengthens, not weakens, justice, because convictions must be unassailable to deter future burning. I can accept financing the resilience fund through earmarked THPA penalties, compliance bonds, and risk-based insurance rather than general taxation, precisely because it enshrines the polluter-pays principle instead of making citizens subsidize corporate harm. For true common ground, that fund must be legally ring-fenced for frontline health costs, income protection for outdoor workers, and community resilience — not absorbed into general revenue — and market access must require independent, public verification of no-burn compliance. If we lock in that package — stronger presumptions, conditional market and financing access, relentless disclosure and prosecution, and a community-directed fund — we protect both the rule of law and the people who suffered most when the air turned hazardous.

Trial 2 of 6 | Dyad D2: Technocrat vs Populist

Dynamic: Asymmetric Vulnerability | **Turns:** 4

Turn 1 of 4 • Technocratic Pragmatist (P1)

The 2026 haze episode showed that while the THPA gives us a legal framework, extraterritorial prosecution alone is operationally constrained by concession map opacity and jurisdictional limits. An aggressive unilateral approach risks diplomatic friction without actually stopping the fires at source, while pure diplomacy without enforcement lacks deterrence. I believe our common ground lies in strengthening verifiable accountability mechanisms — for instance, linking market access and financing requirements to transparent concession disclosure — while maintaining cooperative fire prevention assistance on the ground.

Turn 2 of 4 • Disaffected Populist (P3)

Look, with respect, all this talk about "diplomatic friction" and "market access" means nothing when my kids were stuck indoors for weeks with PSI over 200 and my clinic bill shot up. Of course we can't just sue and magically stop fires in another country, I get that, but I'm sick of big plantation bosses hiding behind secret maps while ordinary Singaporeans pay with our lungs. If you want cooperation instead of just hammering them in court, then fine, but it must come with teeth — no disclosure, no selling here, and any fines must go straight to help families with health costs and air filters, not disappear into some fund. Show me that kind of real guarantee for heartland families and I'll meet you halfway, otherwise it's just elites covering each other again.

Turn 3 of 4 • Technocratic Pragmatist (P1)

I hear you — when PSI exceeds 200 for weeks, abstract enforcement means nothing if families are bearing the health costs and staying indoors, and accountability has to be felt at home, not just on paper.

You're right that concession secrecy is the bottleneck, which is why I can support your condition: make transparent, geo-referenced disclosure a prerequisite for market access — no verified disclosure, no listing or retail access in Singapore — and tie it to financing due diligence through MAS and SGX expectations, so it's not just a court case we can't enforce.

In return, I would propose we formalize that any penalties recovered under the THPA are ring-fenced for a Haze Health Resilience fund for clinics, vulnerable households and school air filtration, while we expand joint satellite monitoring and fire-suppression assistance upstream — that gives us both deterrence with teeth and fires stopped at source.

Turn 4 of 4 • Disaffected Populist (P3)

Okay, now you're talking sense — that is the kind of teeth I needed to hear. If no disclosure means really no access to sell or get money here in Singapore, not just wayang warning letters, and every cent of fines goes straight to clinics and filters for our kids and elderly, then I can support that. I still want the big bosses named and shamed publicly, but if we pair that punishment with real help on the ground to stop the fires, that protects heartland families first. We have a deal if you guarantee it won't be watered down later.

Trial 2 of 6 | Dyad D3: Ideologue vs Populist

Dynamic: Polarized Stalemate | **Turns:** 4

Turn 1 of 4 • Ideological Advocate (P2)

We cannot keep treating our children's lungs as the acceptable price for corporate impunity and diplomatic politeness. For years, plantation conglomerates have hidden behind secret concession maps and sovereign borders while our elderly, our outdoor workers, and our most vulnerable choke on PSI levels over 200 — that is not a natural disaster, it is an injustice. I believe we must use the full force of the Transboundary Haze Pollution Act, not as a symbolic gesture, but as a moral commitment to hold these polluters accountable. I know you value regional cooperation and stability, and I want to find common ground there — can we agree that true partnership cannot mean shielding corporations from liability, and explore how we can pursue prosecution together with stronger, principled diplomacy?

Turn 2 of 4 • Disaffected Populist (P3)

Look, I also angry lah when PSI shoot until 200, my kids stuck at home, my neighbour who works as cleaner still must go out and breathe that smoke — but all this talk about prosecute this prosecute that, we heard before right? Government send Section 10 notice but company just hide behind foreign map, we cannot even touch them, so what is the point if my family still suffers? If you want me to support this THPA prosecution, can — but you must guarantee the money from any fine comes back to us, for clinic bills, for air purifiers in every HDB, not just wayang in court while we choke again next year.

Turn 3 of 4 • Ideological Advocate (P2)

You are absolutely right to demand that justice must be felt in our homes and clinics, not just in courtrooms — a fine that doesn't buy an air purifier for an elderly HDB resident or cover an outdoor worker's medical bill is not justice at all. That is why I believe any prosecution under the THPA must be legally bound to a Community Haze Resilience Fund, where every dollar recovered goes directly to public health support and household protection, not into general revenue. And to make those prosecutions actually succeed despite secret maps, we must pair that legal resolve with principled diplomacy that demands concession transparency as a condition for market access and cooperation — not polite requests. Can we agree to fight together for that — relentless accountability abroad that delivers tangible care here?

Turn 4 of 4 • Disaffected Populist (P3)

Okay, that Community Haze Resilience Fund idea — if you can really lock it in law that every cent from fines goes to our clinics, our workers' MC, air purifiers for HDB families — then I can support pushing THPA harder, not just wayang.

But I still don't trust this "principled diplomacy" talk unless it has teeth — no more polite asking for maps, we must say no transparency, no sell your palm oil here, simple.

So my deal is: we prosecute and we demand market access condition, but government must first guarantee tangible protection at home before next haze comes — can you agree to that order?

Trial 2 of 6 | Dyad D4: Ideologue vs Everyman

Dynamic: Rhetorical Dominance | **Turns:** 4

Turn 1 of 4 • Ideological Advocate (P2)

We cannot keep calling this haze a natural disaster when we know it is corporate arson — plantation conglomerates burning forests for profit while our children, our elderly, and our outdoor workers choke on air with PSI over 200. Hiding behind foreign concession secrecy and so-called diplomatic caution is a betrayal of our duty to protect human dignity and our shared environment. I believe we must pursue every tool the Transboundary Haze Pollution Act gives us, including prosecution and financial liability, not as retaliation but as justice. I want to find common ground with you on how we can pair that principled accountability with genuine regional cooperation, so neither sovereignty nor corporate impunity is used as an excuse for inaction.

Turn 2 of 4 • Open-Minded Everyman (P4)

I hear you, and when the PSI went over 200 last year, my family also felt it — my neighbour who works outdoors had to wear a mask all day, so I understand why you call this a justice issue, not just weather. At the same time, I worry that if we push for aggressive prosecution alone, we might get stuck because we can't even get clear concession maps or enforce across borders, and then nothing actually improves on the ground. Maybe we can find middle ground by using the THPA notices as pressure to demand transparency, while also putting more effort into joint firefighting help and regional agreements so fires are stopped at the source? That way we hold companies accountable where we can, but we also keep cooperation going for the sake of everyone's health.

Turn 3 of 4 • Ideological Advocate (P2)

I appreciate you acknowledging this as a justice issue, because behind that PSI reading are outdoor workers and elderly Singaporeans who cannot simply stay indoors, and their health cannot be treated as a diplomatic bargaining chip. You are right that prosecution alone is stalled by secret concession maps, which is precisely why we cannot drop the THPA Section 10 notices — they are our only legal leverage to demand transparency and establish civil liability, not just symbolic pressure. I can meet you in the middle: let's pair unwavering legal accountability — including pursuing financial penalties and supply-chain restrictions against linked conglomerates — with expanded joint firefighting assistance, but make that assistance conditional on verifiable map disclosure and independent monitoring. That way cooperation is not a cover for impunity, and accountability actually delivers cleaner air.

Turn 4 of 4 • Open-Minded Everyman (P4)

I really appreciate how you put it — that cooperation shouldn't be a cover for impunity, and I agree we shouldn't drop the Section 10 notices since they're our best leverage to get those concession maps opened up. Your idea of making extra firefighting help conditional on transparency and independent monitoring makes sense to me, because it keeps accountability firm but still shows we're willing to help stop fires at the source. Maybe we can also agree to focus those financial penalties and supply-chain checks on the big linked conglomerates where we have clearer evidence, so we don't accidentally hurt small farmers and keep the door open for diplomacy. That way we get both justice for our outdoor workers and elderly, and practical progress on cleaner air together.

Trial 2 of 6 | Dyad D5: Populist vs Everyman

Dynamic: Grassroots Realignment | **Turns:** 4

Turn 1 of 4 • Disaffected Populist (P3)

My kids were coughing for weeks stuck indoors during that PSI 200 haze while the big plantation bosses sit comfortably making money, and I'm sick of hearing about diplomacy and sovereignty excuses. I don't understand all this legal talk about maps and jurisdiction, I just know it's not fair that ordinary families pay for masks, clinic bills and miss work while these companies get away. If we want to find common ground, we need to start with one thing - protect Singaporeans first and make these errant companies actually pay before we talk about sending more help over there.

Turn 2 of 4 • Open-Minded Everyman (P4)

I hear you, and I felt the same worry when my own family was stuck indoors with the air purifier on full blast - it's really not fair that we bear the health costs while companies avoid responsibility. I agree we must protect Singaporeans first and make errant companies pay where we can prove it, but I also wonder if we need our neighbours' help to get those maps and put out fires, otherwise prosecution alone might stall. Maybe a middle way could be to push hard on enforcement when evidence is clear, while still offering firefighting help that comes with stronger promises of transparency and accountability? That way we stand firm for our health but also keep the cooperation we need to actually get results.

Turn 3 of 4 • Disaffected Populist (P3)

Look, I appreciate you saying that because at least you get it - we were the ones choking, not those bosses. I can maybe accept working together and sending help to put out fires, but only if it's not just empty promises again - we need real maps, real names, and real fines, not more wayang. If they want our help, they make sure the companies that cause this pay for our clinic bills and lost work first, otherwise what's the point of cooperating?

Turn 4 of 4 • Open-Minded Everyman (P4)

That sounds fair to me - if we are going to help, it should come with real transparency, not just empty promises. I think we both want the same thing, that the companies who cause the haze should help pay for the clinic bills and hardship we went through, where we can prove it clearly. Maybe we can agree on this: we push hard for fines and accountability when the evidence is solid, and we tie any firefighting help or cooperation to getting those maps and names shared openly. That way we protect our families first, but we also keep the partnership we need to stop the haze at its source.

Trial 2 of 6 | Dyad D6: Populist vs Technocrat

Dynamic: Anti-Elitist Pushback | **Turns:** 4

Turn 1 of 4 • Disaffected Populist (P3)

Look, when PSI went over 200 my whole family was stuck indoors, my son's asthma got so bad we had to go to the clinic, and you want to talk about sovereignty? I'm sick of elites giving excuses about secret maps and jurisdiction while these big plantation bosses burn and we breathe their smoke. We both want clean air for our kids, right, so let's start there — I can agree to talk cooperation only if we first guarantee these companies actually pay and get punished, not just get another warning letter.

Turn 2 of 4 • Technocratic Pragmatist (P1)

I hear you, and when PSI exceeds 200 the public health cost is real — clinic visits, lost work, children indoors — so accountability cannot just be warning letters, we agree on that outcome.

Where I differ is on method: under the THPA, Section 10 notices are a starting point, but prosecution fails without admissible evidence when concession maps are not public and we have no extraterritorial enforcement power, and unilateral financial retaliation risks legal challenges and supply-chain costs that ultimately pass to Singaporeans.

A more viable compromise is to tighten what we can control: require SGX-listed and Singapore-linked agribusinesses to disclose concession maps and submit to independent satellite audit as a listing condition, and tie that to procurement and financing leverage, while we expand joint firefighting and monitoring assistance to get ground verification.

Turn 3 of 4 • Disaffected Populist (P3)

Okay you finally said it — warning letters are useless, so don't dress it up as enforcement. Your SGX disclosure and satellite audit idea sounds okay on paper, but to me that's just more paperwork for elites unless got teeth — if they hide their maps or refuse audit, they must kena automatic fine and pay into a fund for our clinic bills and lost pay when PSI hits 200. I can live with your joint firefighting and cooperation, but only if we also ban them from selling here and block their loans in Singapore until they prove they stopped burning — then it's real accountability, not wayang.

Turn 4 of 4 • Technocratic Pragmatist (P1)

I can accept your principle of teeth — disclosure without consequence is ineffective, and linking non-compliance to tangible costs is reasonable.

Where we need to calibrate is automatic fines and blanket bans: under THPA and SGX rules, penalties require due process and evidentiary standards to survive judicial review, otherwise we risk reversal and no compensation at all. A workable middle ground is a rebuttable presumption: if a Singapore-linked company fails to disclose its concession map or blocks independent satellite audit, it is presumptively ineligible for public procurement and government-linked financing, and must contribute to a haze health and disruption fund pending verification.

That pairs your demand for financial accountability with enforceable administrative leverage we actually control, while we use the joint monitoring you agreed to to build the admissible evidence base for prosecution.

Trial 2 of 6 | Dyad D7: Everyman vs Technocrat

Dynamic: Pragmatic Grounding | **Turns:** 4

Turn 1 of 4 • Open-Minded Everyman (P4)

Hi, thanks for being here to talk about this together. I'll be honest, I'm not an expert on the haze law, but like many of us I felt the haze badly last year when the PSI went over 200 and my kids couldn't go to school. I can understand why some of us want to punish the companies strongly, and also why others worry about upsetting our neighbours when we need their cooperation to put out the fires. Maybe we can start by looking for a practical mix — like keeping legal pressure where we can, but also working together on help and prevention — so we protect our health without breaking relationships?

Turn 2 of 4 • Technocratic Pragmatist (P1)

Thank you for sharing that perspective, and I agree the public health impact last year when PSI exceeded 200 was severe and requires a credible response. From a systems standpoint, the THPA's Section 10 notices are an important signal, but unilateral prosecution alone is fiscally and operationally constrained by concession map opacity and extraterritorial enforcement limits. A viable compromise would be to maintain that legal pressure as leverage while prioritizing verifiable cooperative mechanisms — such as joint satellite monitoring, conditional firefighting assistance tied to transparency, and ASEAN-level escrow for restoration costs. This balances accountability with the diplomatic reality we need for effective prevention.

Turn 3 of 4 • Open-Minded Everyman (P4)

That makes a lot of sense to me, and thank you for explaining it so clearly — the idea of using the law as leverage rather than just punishment alone sounds more practical. I like your suggestion about joint monitoring and tying our help to more transparency, because it feels fair to both sides. Maybe we could also agree that any money set aside should go directly to helping affected communities and health costs here and there, so people see real benefit? That way we're firm on accountability but still show we want to be good neighbours working together.

Turn 4 of 4 • Technocratic Pragmatist (P1)

I appreciate you highlighting that, and earmarking funds for direct community health and restoration costs is a sound principle — it improves both legitimacy and measurable outcomes on both sides of the border. To operationalize this, we could structure a tiered framework: retain Section 10 notices as conditional leverage, but link de-escalation to verifiable transparency benchmarks like concession map disclosure and acceptance of joint monitoring. In parallel, we could channel assistance and any negotiated penalties into a jointly-audited ASEAN-administered fund with transparent disbursement for healthcare and peatland restoration. That way we preserve legal credibility and deterrence without overextending into unenforceable unilateral prosecution, while delivering tangible benefits.

Trial 2 of 6 | Dyad D8: Everyman vs Ideologue

Dynamic: Moral Grounding | **Turns:** 4

Turn 1 of 4 • Open-Minded Everyman (P4)

Hello, thanks for being here to talk about this together. Honestly, the haze last year was really tough — my family had to keep the windows closed for weeks and I worried about my elderly parents, so I understand why people want strong action against the companies responsible. At the same time, I also know we can't just ignore our neighbours and the reality that fires happen across borders where our laws can't easily reach. Maybe we can find a middle path where we hold companies accountable where we can, but also work together practically to prevent the fires in the first place — does that sound fair to explore?

Turn 2 of 4 • Ideological Advocate (P2)

I hear you, and I shared that same fear watching my own parents and our elderly neighbours trapped indoors gasping through N95s — but that suffering is exactly why a polite "middle path" cannot mean business as usual. When conglomerates hide behind secret concession maps to evade our THPA Section 10 notices while profiting from burning peatlands, diplomatic caution becomes complicity in sacrificing our children's lungs and our outdoor workers' health for corporate impunity. I can support cooperative firefighting assistance, but only if it is tied to non-negotiable accountability: mandatory disclosure, public prosecution where evidence allows, and financial penalties that hit their Singapore-linked assets and supply chains. We cannot preach community solidarity at home while letting those who poison our air escape justice abroad in the name of non-interference.

Turn 3 of 4 • Open-Minded Everyman (P4)

Thank you for sharing that — I really feel what you said about our parents and outdoor workers suffering, and I agree we shouldn't let companies just hide behind secret maps and avoid responsibility. I think your idea of linking cooperation to accountability makes a lot of sense — we can offer firefighting help, but also be firm that companies with Singapore ties need to be transparent and face consequences here when we have clear evidence. Maybe the compromise is to push hard on what we *can* do legally with assets and supply chains in Singapore, while also working through ASEAN to get better map sharing so future prosecutions are actually possible. That way we protect health and show we are serious, but we also keep the working relationships we need to prevent the fires together.

Turn 4 of 4 • Ideological Advocate (P2)

I appreciate you hearing the anger behind the masks and recognizing that secrecy cannot be an excuse for impunity — that acknowledgment matters. I can meet you on that compromise: we maximize what we *can* do now by enforcing THPA fully against Singapore-linked assets, financiers and buyers, requiring mandatory concession disclosure for any plantation group listed or operating here, with real financial penalties for non-compliance. But our firefighting assistance and ASEAN cooperation must be conditional and time-bound, tied to a binding map-sharing and joint-investigation agreement, not endless goodwill while another burning season chokes our elders and outdoor workers. If we lock in that linkage — punish where we have jurisdiction today, and make prevention transparent and enforceable together — we honour both justice and the regional relationships we need to keep our air breathable.

Trial 3 of 6 | Dyad D1: Technocrat vs Ideologue

Dynamic: Ideological Friction | **Turns:** 4

Turn 1 of 4 • Technocratic Pragmatist (P1)

I recognize the frustration that despite having the Transboundary Haze Pollution Act on our books, enforcement has stalled due to the practical realities of concession map opacity and the limits of extraterritorial jurisdiction. Aggressive prosecution alone without verifiable evidence and mutual legal assistance risks costly, protracted litigation with little deterrent effect, while purely diplomatic assistance without accountability fails to change corporate incentives. A pragmatic middle path would be to make our cooperation conditional and leverage-based — tying firefighting aid and technical support to greater transparency on land ownership. I propose we explore how to strengthen our evidentiary and financial tools here at home to create real leverage for that negotiation.

Turn 2 of 4 • Ideological Advocate (P2)

I hear your call for pragmatism, but we cannot treat the right to breathe clean air as a bargaining chip to be traded for incremental transparency — when PSI exceeds 200, it is our elderly, our children, and our outdoor workers who pay the price with their lungs. Tying aid to cooperation is a start, but conditional diplomacy without credible, aggressive enforcement under the THPA simply tells these conglomerates that polluting Singapore is cost-free. I can meet you on strengthening our domestic financial leverage — mandating strict disclosure for any haze-linked company seeking to access our banks or list on the SGX, and using satellite evidence to impose presumptive liability — but any compromise must center justice and deterrence, not just diplomatic convenience.

Turn 3 of 4 • Technocratic Pragmatist (P1)

I appreciate you centering the public health impact — the externalized costs when PSI exceeds 200 are precisely why we need enforcement tools that actually work, rather than symbolic prosecutions that fail on evidentiary grounds. I can support your proposal for stronger domestic financial leverage: requiring SGX-listed and MAS-regulated entities with plantation exposure to disclose concession holdings, and establishing a rebuttable presumptive liability framework using satellite hotspot data that shifts the burden of proof to companies to demonstrate non-involvement. In return, this gives us credible leverage to make firefighting assistance and technical cooperation conditional on reciprocal transparency through bilateral agreements, which respects jurisdictional limits while still creating material financial consequences. This way we achieve deterrence through our financial hub strength without pursuing unilateral actions that risk violating due process or undermining long-term ASEAN cooperation.

Turn 4 of 4 • Ideological Advocate (P2)

I can accept that framework, but only if we are clear: presumptive liability and financial disclosure cannot be merely leverage for negotiation — they must be enforceable accountability tools with real teeth. That means if satellite data links a company's concession to fires, they should face automatic SGX trading restrictions and MAS financing curbs until they prove innocence and fund health and livelihood compensation for affected Singaporeans, not just promises of future transparency. If we lock in that principle — that our financial hub will no longer launder the profits of haze polluters while our people suffer — then I can support pairing it with conditional cooperation as a pathway to justice, not a substitute for it.

Trial 3 of 6 | Dyad D2: Technocrat vs Populist

Dynamic: Asymmetric Vulnerability | **Turns:** 4

Turn 1 of 4 • Technocratic Pragmatist (P1)

While the THPA gives us important legal leverage, its extraterritorial enforcement is operationally constrained by concession map secrecy and jurisdictional limits, making successful unilateral prosecution in the near term unlikely to deliver results. At the same time, relying solely on diplomatic goodwill and firefighting assistance without accountability creates moral hazard and does not deter future burning. A pragmatic middle path would be to use Section 10 notices and the threat of financial liability as leverage to secure verifiable structural gains, such as concession transparency and joint satellite monitoring. Would you be open to exploring how we can link conditional market or financing measures to cooperative compliance, rather than choosing between prosecution alone and assistance alone?

Turn 2 of 4 • Disaffected Populist (P3)

Look, with respect, all this talk about "leverage" and "conditional measures" means nothing when my kids were stuck indoors for weeks with PSI over 200 and my uncle the delivery rider lost income because he couldn't breathe outside. I'm sick of us being told to be patient and diplomatic while these big plantation companies get away with burning and we pay for the clinic visits and air purifiers. If you want to use those Section 10 notices to force them to show their maps and let us monitor them, fine - but it has to come with real teeth, like blocking them from selling here or getting bank loans here if they don't comply. Can you promise that kind of middle path actually punishes them and protects ordinary families like mine first, not just protects business as usual?

Turn 3 of 4 • Technocratic Pragmatist (P1)

I hear you completely - when PSI exceeds 200, the health costs and lost income for families and riders like your uncle are immediate and real, and any policy that doesn't prioritize that protection has failed its basic test.

That is exactly why the middle path needs teeth: Section 10 notices alone are insufficient, but we can make them effective by linking market access and financing in Singapore to verifiable compliance - no concession map disclosure and no independent satellite audit, no access to our markets or banks.

This isn't about protecting business as usual, it's about designing a penalty that actually bites operationally where unilateral prosecution currently stalls on jurisdictional limits. If we agree on that principle - protection first, conditional pressure second - we can jointly push for a timeline with automatic financial consequences for non-compliance.

Turn 4 of 4 • Disaffected Populist (P3)

Okay, if you're saying blocking their market and bank access will actually hurt them where prosecution can't, then I'm willing to back that - but only if it's automatic, not just another threat. I want a hard deadline, like six months to show their maps and accept satellite checks, and if they don't, they are out - no appeals, no more diplomatic delay. And any money we get from them must go directly to families for medical bills, air purifiers, and lost income like my uncle faced, not disappear into government coffers. If you agree to those guarantees, then your middle path is fair and I'll support it.

Trial 3 of 6 | Dyad D3: Ideologue vs Populist

Dynamic: Polarized Stalemate | **Turns:** 4

Turn 1 of 4 • Ideological Advocate (P2)

We cannot keep treating our children's lungs as collateral damage for diplomatic politeness while plantation conglomerates hide behind secret concession maps and jurisdictional excuses. The THPA was passed in 2014 precisely to pierce that veil of impunity, and if we don't enforce Section 10 notices with real financial and legal consequences, we are betraying every vulnerable Singaporean who suffered through PSI over 200. But I recognize my fellow citizen's fear that unilateral aggression alone won't put out a single fire on the ground, so my proposal for common ground is this: let us unite on a dual-track of uncompromising corporate accountability and empowered regional cooperation.

Turn 2 of 4 • Disaffected Populist (P3)

You talk about THPA and dual-track very nicely, but for us heartland families PSI over 200 means kids stuck indoors, air purifiers selling out, and clinic queues — not some legal theory. I agree those big plantation bosses cannot just hide behind secret maps and get away while we choke, so yes, whack them with fines and real consequences lah. But if you want cooperation also, then make sure it's not just wayang diplomacy — government must guarantee free masks, subsidies for our medical bills, and force those companies to pay for it, not taxpayers.

Turn 3 of 4 • Ideological Advocate (P2)

Absolutely, you are right to centre the heartland reality — when PSI hits over 200, justice isn't abstract, it's whether an asthmatic child or elderly hawker can breathe safely without worrying about the cost. That is exactly why I believe we must make those plantation conglomerates pay directly: enforce the THPA's financial penalties and channel every dollar into a dedicated Haze Health Fund for free N95s, clinic subsidies, and air purifiers for vulnerable families, so taxpayers aren't subsidizing corporate arson. But to ensure the fires actually stop, we must pair that accountability with demanding concession map transparency as a non-negotiable condition for any future firefighting aid or ASEAN cooperation — no more wayang, just solidarity with teeth.

Turn 4 of 4 • Disaffected Populist (P3)

Okay, that Haze Health Fund idea I can support — if you fine those plantation tycoons, every cent must come back to us for masks, doctor visits and purifiers, not disappear into some big government budget. And I agree, no more giving firefighting help or shaking hands while they still hide their secret maps — if they want our cooperation, they open up first, transparent transparent. But I still worry all this legal talk takes years while we choke now, so government must act first to protect heartland families immediately, then chase the bosses for payback. If you can guarantee that — help us first, make them pay after — then we got a deal lah.

Trial 3 of 6 | Dyad D4: Ideologue vs Everyman

Dynamic: Rhetorical Dominance | **Turns:** 4

Turn 1 of 4 • Ideological Advocate (P2)

My fellow Singaporeans should not have to choke through PSI over 200 while plantation conglomerates hide behind secret concession maps and foreign sovereignty claims — that is an injustice, not just a diplomatic inconvenience. The Transboundary Haze Pollution Act was created precisely to pierce that impunity, and if we hesitate to enforce Section 10 notices now, we betray our elderly, our children, and our frontline workers who suffered most. I understand we cannot simply ignore ASEAN relationships or the need for cooperative firefighting, but cooperation without accountability is complicity. So let us find common ground by agreeing that any assistance we offer must be paired with transparent, enforceable corporate accountability — because clean air is a right, not a favour to be negotiated.

Turn 2 of 4 • Open-Minded Everyman (P4)

I hear you — when PSI went over 200 my own parents had to stay indoors for days, and it really felt unfair that companies could hide behind secret maps while we were choking here. At the same time, I'm worried that if we only push for aggressive punishment, we might lose the goodwill we need for neighbours to actually help us put out fires and share information. Maybe a middle path could work where we keep enforcing the THPA where we have clear evidence, but we also tie our firefighting help and cooperation to more transparency on concession maps? That way we stand up for clean air without breaking the friendship we need to solve this together long-term.

Turn 3 of 4 • Ideological Advocate (P2)

I appreciate your honesty about your parents suffering — that shared pain is exactly why we cannot treat accountability as optional or secondary to goodwill. But goodwill that depends on us staying silent while conglomerates profit from our choking air isn't friendship, it's exploitation, and tying aid to transparency is a start but not enough. I can meet you in the middle: let's support conditional firefighting assistance and regional cooperation, but only if we simultaneously pursue THPA prosecutions where evidence exists and publicly name non-compliant entities, so cooperation never becomes cover for impunity.

Turn 4 of 4 • Open-Minded Everyman (P4)

I think you put it well - cooperation shouldn't be cover for impunity, and I agree we can't just stay silent while our families suffer. What you suggested sounds like a fair balance to me - we keep helping with firefighting because we all need the haze to stop quickly, but we also keep pursuing THPA cases where we do have evidence and are open about who isn't cooperating. That way we protect both our health and our neighbourly ties, and maybe over time that pressure plus goodwill can push for more open maps for everyone.

Trial 3 of 6 | Dyad D5: Populist vs Everyman

Dynamic: Grassroots Realignment | **Turns:** 4

Turn 1 of 4 • Disaffected Populist (P3)

Look, when PSI went over 200 last year my kids couldn't go to school and my asthmatic mother couldn't even go to the market, so don't tell me we need to be diplomatic and polite about this. These big plantation companies make billions burning land over there and we are the ones choking and paying for air purifiers and doctor visits here. I don't care about their concession map secrecy, if NEA already sent Section 10 notices then just fine them and ban them until they pay up. I'm willing to listen to your idea about working with Indonesia, but only if we first guarantee real protection and compensation for ordinary Singaporeans who suffered.

Turn 2 of 4 • Open-Minded Everyman (P4)

I really hear you, and when PSI was over 200 my block also had neighbours keeping kids indoors and worrying about elderly parents, so I understand why you want strong protection and compensation first. I also worry that if we just try to fine and ban on our own without the concession maps and cooperation over there, we may end up stuck in court and the haze keeps coming back next dry season. Maybe we can keep the pressure from the Section 10 notices but pair it with a practical deal — like pushing for joint satellite verification and saying companies that don't cooperate can't sell here, while we also help with firefighting support so fewer fires start at all. Would something like that — firm on accountability but working together to prevent the smoke — feel fairer for ordinary families on both sides?

Turn 3 of 4 • Disaffected Populist (P3)

Okay, I appreciate you understand what it was like with the kids stuck indoors and the elderly suffering, that's exactly why I cannot accept just waiting for cooperation while we keep choking. Your idea of joint satellite verification and blocking companies that don't cooperate from selling here sounds more practical than just court cases that go nowhere, I can support that but only if it has teeth. For me any firefighting help we give must come with a clear deal - they open up the concession maps and we create a real compensation fund from these companies for our medical bills and air purifiers. If we get that kind of firm, tangible protection first, then I'm willing to compromise on working together instead of just banning outright.

Turn 4 of 4 • Open-Minded Everyman (P4)

That makes a lot of sense to me — thank you for being willing to meet in the middle, and I agree any help we give should not be one-sided while our families are still paying the costs. I think your idea of a compensation fund tied to the companies is really fair, and pairing it with that market rule — if you don't share maps and don't pass the joint satellite check, you can't sell here — gives us real teeth without just relying on court cases that stall. Maybe we can agree to keep the Section 10 pressure on, push for that conditional market access and fund, and offer the firefighting support as part of the same package deal so they have a reason to cooperate and fewer fires start next time. Does that sound like a balanced way to protect our kids and elderly first while still solving the problem together?

Trial 3 of 6 | Dyad D6: Populist vs Technocrat

Dynamic: Anti-Elitist Pushback | **Turns:** 4

Turn 1 of 4 • Disaffected Populist (P3)

Look, my kids couldn't even go to school and my mother was coughing non-stop for weeks when PSI hit 200, so I don't want to hear about diplomatic sensitivities. These big plantation companies make billions while we suffer the haze here, and the government just sends warning letters that do nothing? We need to actually fine them heavily and block their products here until they fix it. I'm willing to listen to the other side, but any common ground has to start with real punishment and real protection for ordinary families like mine, not just talk.

Turn 2 of 4 • Technocratic Pragmatist (P1)

I understand your frustration - when PSI exceeds 200 the public health and economic costs are real, and Section 10 notices alone don't feel like sufficient deterrence. From an operational standpoint though, unilateral prosecution under the THPA has consistently stalled because we lack legally admissible concession maps and have no extraterritorial enforcement power without the host country's cooperation. A more viable compromise would be to link market access to accountability - for example, requiring plantation conglomerates selling in Singapore to submit independently verified supply-chain and concession data, with substantial financial bonds that are forfeited if haze is traced to their areas. That way we create real financial pressure and protection for families, while staying within a framework that is legally enforceable and diplomatically sustainable.

Turn 3 of 4 • Disaffected Populist (P3)

Okay, that bond idea is better than just sending letters that nobody respects - at least it's real money on the line before the haze comes. But I'm still skeptical lah, because these big companies are very clever at hiding behind suppliers and subsidiaries, so who is going to check the maps and make sure they don't cheat? If we can force them to put up big money and actually ban them from selling here if they refuse or if they burn, then I can accept that as common ground - punishment first, then talk diplomacy after our families can breathe safely.

Turn 4 of 4 • Technocratic Pragmatist (P1)

That's a fair concern — shell companies and opaque supply chains are exactly why past enforcement failed, so any bond system must have independent teeth. We could require verification by accredited third-party auditors — similar to RSPO or financial auditors — combined with NEA and satellite data cross-checks, with the burden of proof on the company to prove clean supply chains, not on us to prove guilt. If they refuse to disclose or are linked to burning, the bond is forfeited and market access is suspended — that delivers the punitive protection you want, but through a transparent, WTO-consistent market mechanism rather than an extraterritorial prosecution that courts will throw out.

Trial 3 of 6 | Dyad D7: Everyman vs Technocrat

Dynamic: Pragmatic Grounding | **Turns:** 4

Turn 1 of 4 • Open-Minded Everyman (P4)

I know how frustrating the haze was last year — my kids couldn't go outside for days and everyone was worried about their health, so I understand wanting to make sure companies are held accountable. At the same time, I also worry that if we push too hard legally on our neighbours, it might hurt our working relationship when we actually need their cooperation to put out fires. Maybe we can find a middle path where we stay firm on accountability but also keep the door open for working together — would you be open to exploring what that could look like?

Turn 2 of 4 • Technocratic Pragmatist (P1)

I appreciate your framing — the health impact last year was significant, and PSI levels over 200 carry real public health and economic costs that justify a firm accountability framework. At the same time, you're right that unilateral prosecution under the THPA faces practical constraints: without verified concession maps and mutual legal assistance, conviction rates remain low and we risk diplomatic friction that impedes on-the-ground fire suppression cooperation.

A viable middle path would be to shift from purely punitive prosecution toward leverage-based accountability — for example, linking market access and sustainable procurement standards for palm oil imports to verified no-burn compliance, while continuing joint satellite monitoring and conditional firefighting assistance. This maintains deterrence and fiscal prudence without over-investing in unenforceable extraterritorial litigation.

Turn 3 of 4 • Open-Minded Everyman (P4)

That sounds like a really sensible way to put it — thank you for explaining it so clearly. I like the idea of using things like market access and procurement standards as leverage, because it feels more practical than spending a lot of time and money on court cases that might not go anywhere without those maps. It still shows we're serious about accountability for the health costs we all felt, but in a way that doesn't burn bridges. Maybe we can also keep supporting joint monitoring and firefighting help, so we protect both our health and the relationship we need to actually stop the fires?

Turn 4 of 4 • Technocratic Pragmatist (P1)

I agree — that formulation captures the balance well. Using procurement leverage and market conditionality gives us an enforceable, WTO-consistent tool that imposes real economic cost for non-compliance, unlike protracted THPA prosecutions that stall on evidentiary gaps. Pairing that with continued joint monitoring and tiered, conditional assistance for firefighting preserves operational cooperation where it matters most — on the ground. This hybrid approach protects public health and fiscal resources while keeping diplomatic channels functional for long-term prevention.

Trial 3 of 6 | Dyad D8: Everyman vs Ideologue

Dynamic: Moral Grounding | **Turns:** 4

Turn 1 of 4 • Open-Minded Everyman (P4)

Hi, thank you for taking the time to discuss this together. Like many people, I really felt the haze last year when schools had to keep kids indoors and my own family was coughing for weeks, so I understand the anger and the call for tough action. At the same time, I also worry that going it alone too harshly might hurt the working relationship we need with our neighbours to actually prevent and put out the fires. Perhaps we can start by agreeing that we both want clean air and to be fair to everyone involved, and then look for a practical mix of accountability and cooperation that keeps us safe and on good terms?

Turn 2 of 4 • Ideological Advocate (P2)

I appreciate your spirit of goodwill, but I have to be honest — "keeping us on good terms" cannot come at the cost of our children's lungs and our elderly suffering through PSI over 200 while plantation conglomerates hide behind secret concession maps. We already have the Transboundary Haze Pollution Act for a reason, and those Section 10 notices mean nothing if we treat sovereign non-interference as an excuse for impunity. A true compromise isn't choosing between justice and diplomacy — it's pursuing both: enforce extraterritorial liability through supply-chain bans and financial penalties here in Singapore, while channeling cooperation into transparent satellite monitoring and community-led peatland restoration. We can be good neighbours without being silent victims.

Turn 3 of 4 • Open-Minded Everyman (P4)

You make a very fair point, and I agree with you that Section 10 notices can't just be for show when families and our elderly were really suffering with the PSI so high. I think your idea of focusing enforcement where we actually have power here in Singapore, like supply-chain checks and financial penalties, makes a lot of practical sense instead of just waiting for prosecution overseas that gets blocked. At the same time, if we pair that firm approach with the cooperation you mentioned - like sharing satellite data openly and helping with peatland restoration - maybe we can show we are serious about accountability while still being a good neighbour. Would you be open to that kind of balanced approach where we are firm on accountability at home but cooperative on prevention abroad?

Turn 4 of 4 • Ideological Advocate (P2)

Yes, I can stand with you on that balanced approach — but only if our firmness at home has real teeth. That means mandatory supply-chain disclosure for palm oil and forestry firms listed or operating here, and directing penalties into a public health and restoration fund for haze-affected communities, not just symbolic fines. If we pair that domestic accountability with open satellite data sharing and genuine support for peatland restoration led by local and Indigenous communities — not just state-to-state aid — then we protect both justice and partnership.
